

OPTITOOL BEV/4

logistic optimization for the beverage industry

OPTITOOL BEV/4 was developed specially for the requirements of the beverage industry and is based on advanced and adaptable optimisation algorithms. OPTITOOL BEV/4 can be used in all scopes like beverage whole sale, breweries or wells. With OPTITOOL BEV/4, the scheduler has a new strategical planning tool with which he can react flexible and quick to short term changes. Hence the costs for logistics will be reduced and the quality for supply is increased. On the other hand the driver is also supported by OPTITOOL, because there is the possibility to give out customer specific information on the on-board computer or print it on the tour plan. Herewith the proximity to the customer is warranted. OPTITOOL automatically keeps all restrictions in mind, like time frames, request for special drivers and so on. Furthermore all restrictions can be set variable.

Our functionality ...

- import of standardtrips from ERP
- standardtrip optimisation
- regard of saisonal fluctuations
- planning flexibility
- beverage empties

Our features ...

- map visualisation
- cost evaluation
- restriction consideration
- output of customer related information

Our solution ...

- system reliability
- cost transparency
- user friendly software
- increase of efficiency

... is your benefit

- clear display
- easy handling
- possibility of fast reactions
- various reports
- comprehensive data display

... are your advantages

- trips at optimal costs
- less dispatching effort
- exact time information
- shorter planing durations

... is your satisfaction

- more customer proximity
- great savings
- better overview
- fast amortisation

Our conclusion ...

OPTITOOL BEV/4 is beverage instustry's solution for scheduling and cost calculation. OPTITOOL BEV/4 increases efficiency and decreases costs!

We would be pleased to inform you personally about the individual possibilities using OPTITOOL BEV/4 in your company.
